PROFILE

Game Designer specializing in combat and levels. I designed the full bestiary of **SolAR**, a geo-RPG live in Singapore and winner of the **Lightship Grand Prize 2025**, and the levels of **Sealcoating Simulator**, on Steam. I care about systems that teach: what each enemy teaches the player, and how combat, progression and space build on each other. I also like teaching: I ran a game design workshop for kids and mentor at game jams.

SPECIALTIES

01 Game Design
Core loop, progression, balance and economy. GDD and Living GDD.

02 Combat Design
Enemies, bosses, player abilities and telegraphs.

03 Level Design
Blockout, flow, encounter pacing and difficulty.

04 FTUE & Onboarding
Teaching systems through play, with no walls of text.

05 Unity Optimization
Zack 2: 25 to 60 FPS on low-end phones with occlusion culling, batching and atlases.

06 Unity / C# Prototyping
Validating mechanics by playing them before they go into production.

EXPERIENCE

KYKUYO
OCT 2023 — AUG 2026

Game Designer · Combat, Enemy & Level Design — Singapore, remote

Location-based games studio. SolAR uses 7,700 real places in Singapore as its map and has passed 5,000 downloads.

- **SolAR's full bestiary:** 19 enemies, 6 of them bosses, the rest with small, normal, large and epic variants. Plus around 6 prototypes that didn't reach production.
- Clear telegraphs and visual and audio feedback on every enemy, prioritizing readability and game feel.
- **Player abilities** (ultimates and special attacks) designed alongside the bestiary, and arenas with their encounter pacing and difficulty curves.
- **Full FTUE** and balancing of combat and long-term progression, documented in a GDD and Living GDD.
- **SolAR × SPCA (2025):** level design and testing for the spin-off featuring real cats from Singapore's SPCA.

Ace 87 Studios
APR 2026 — PRESENT

Co-founder · Game & Level Designer — Sealcoating Simulator

- Designed every playable level: each surface is its own problem of route, order and pacing.
- Core loop and progression that turn a repetitive trade into gameplay, tuned through playtest sessions.
- Full pipeline as a two-person team, from concept and GDD to the published Steam page.

STEAM ↗

Escuela Modelo de Bella Vista
JUL 2025 — DEC 2025

Workshop Instructor · Game Design Workshop

- Two 5th–6th grade classes of about 35 students each (~70 total), Tuesdays and Thursdays.
- Designed a game in which each student built their own adventure, and used it to teach the basics of game design.

MENTORING

- **Global Game Jam UADE 2024:** mentored about 5 teams, giving design and scope feedback so each one shipped a finished game.
- **Design feedback to UADE classmates** in Intro to Game Design, Systems Design, Applied Games and Final Project, which they applied to their submissions.

FEATURED PROJECTS

Cold Blooded

PC · UNITY · FPS · SOLO

Graduation project — built end to end by me

- **3 levels and 3 distinct bosses**, designed and programmed by me.
- Custom waypoint, explosion and object-throwing systems.
- Full level design, programming and writing.

VIEW IN PORTFOLIO ↗

Zack 2

MOBILE · UNITY · SOLO

Survival shooter — design, levels, programming and writing

- **From 25 to 60 stable FPS** on low-end phones.
- 500k+ fewer polygons through level design and occlusion culling, plus combined meshes, texture atlases and static branching to cut draw calls.

Grab it, It's Hot!

PC · UNITY · MULTIPLAYER

Networked party game — programming, game design and level design

- Online multiplayer for up to 16 players with Photon: I handled the programming, mechanics design and levels.
- A small project, but the one I enjoyed making the most.
